

WHAT THEY ARE SAYING ABOUT OFFSHORE OIL & NATURAL GAS IN Georgia

PROJECTED EMPLOYMENT GAINS FOR GEORGIA

WHAT THE OFFICIALS SAY

David Perdue, U.S. Senator

“Energy exploration along the Atlantic coast can help strengthen our economic and national security.”

Buddy Carter, U.S. Representative

“While I am excited about the opportunity for job creation and economic incentives in Georgia, I am deeply disappointed that the President plans to limit energy exploration in other states.”

Chris Clark, Georgia Chamber of Commerce

“The capacity to achieve and maintain energy self-sufficiency will require access to the Nation’s abundant natural resources, with OCS oil and gas resources in new areas playing a vital role in reaching that goal.”

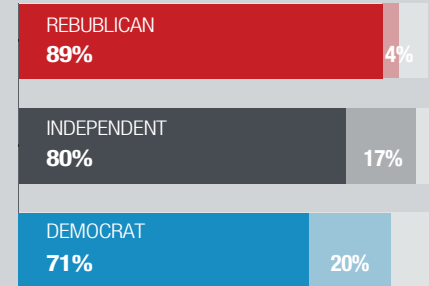

Oil and natural gas development in the Atlantic could create more than **5,000 jobs** in Georgia and raise over **\$700 million** for the state budget by 2035 with revenue sharing in place.

Harris Poll of 602 registered voters on January 13-19, 2015

SUPPORT FROM GEORGIA VOTERS

77% of Georgia voters, a bipartisan majority, **support** offshore drilling.

SEISMIC SURVEYS

The first step in exploring for offshore oil and natural gas resources is often conducted through seismic surveys, which are like ultrasounds of the earth. This safe and proven technology is also used by the U.S. Geological Survey, the National Science Foundation, and the offshore wind industry.

Anti-oil and gas activists are spreading misinformation about seismic surveys. Here’s what a top government scientist had to say about their claims.

Dr. William Y. Brown, Chief Environmental Officer at the Bureau of Ocean Energy Management

“I think those assertions are wildly exaggerated and not supported by the evidence.”
